Fear & Optimism about Our Future

**I've been deeply worried
about the implications of
CLIMATE CHANGE**

and

AUTONOMOUS VEHICLES

Globally: is this year hotter or colder than 20th C average?

Scientists predict +5-6C by 2100 under BAU

THICKNESS OF THE ICE SHEETS
AT VARIOUS LOCATIONS
21,000 YEARS AGO
COMPARED WITH MODERN SKYLINES

“It’s irrelevant to my city”

“It won’t happen in my city for decades.”

**“Pilots are happening in my city
right now”**

**We get to
AV HEAVEN**

**By fixing NOW the problems
that have us currently living in
transport HELL**

Mobility Principles for Liveable Cities

The future of mobility in cities is multimodal and integrated. When vehicles are used, they will be right-sized, shared*, and zero emission. These principles will guide urban decision-makers and stakeholders toward the best outcomes for all.

1
Plan cities and mobility together

2
Focus on moving people, not cars

3
Encourage efficient use of space and assets

4
Engage stakeholders in decision making

5
Design for equitable access

6
Transition towards zero emissions

7
Seek fair user fees

8
Deliver public benefits via open data

9
Promote integration and seamless connectivity

10
Automated vehicles must be shared

*Shared vehicles include all those used for hire to transport people (mass transit, private shuttles, buses, taxis, auto-rickshaws, car-sharing, and bicycle-sharing) and urban delivery vehicles.

#10principles

- **Transition to zero emission**
- **Encourage efficient use of space and assets**
- **Seek fair user fees across all modes**
- **Deliver public benefits via open data**

Start with **intensively used vehicles!**

Buses

Taxis

Utility

Delivery

Have goals for **all vehicles**

6

Transition towards zero emissions

When AVs arrive, shared ones would have to be ZEV; maybe personal ones too.

POLLUTED AIR: 7 million premature deaths per year, 50% linked to transport

SharedMobilityPrinciples.org
#LiveableCities
#10principles

3

Encourage efficient use of space and assets

ROAD CRASHES: 1.2 million deaths per year

SharedMobilityPrinciples.org
#LiveableCities
#10principles

OBESITY linked to **LACK OF PHYSICAL ACTIVITY**: 2.8m adult deaths per year

Here are 200 people in 177 cars

space required
to transport **60** people

car

bus

bicycle

space required
to transport **60** people

car

(inefficient) USE OF SPACE TODAY

MAKING SPACE FOR EFFICIENT MODES WITH LANE ALLOCATION

SHARED TRANSPORT

50 people by 

CYCLE

20 people by 

PRIVATE CARS

6 people by 

When AVs arrive,
If they are SOV,
they will travel here.

(inefficient) USE OF CARS

Zipcar's breakthrough:

undeniable proof that SHARING WORKS

- Is welcomed by mainstream city dwellers
- A viable business model
- Produces real CO2 reductions (& other city benefits)
- Is simple thanks to tech

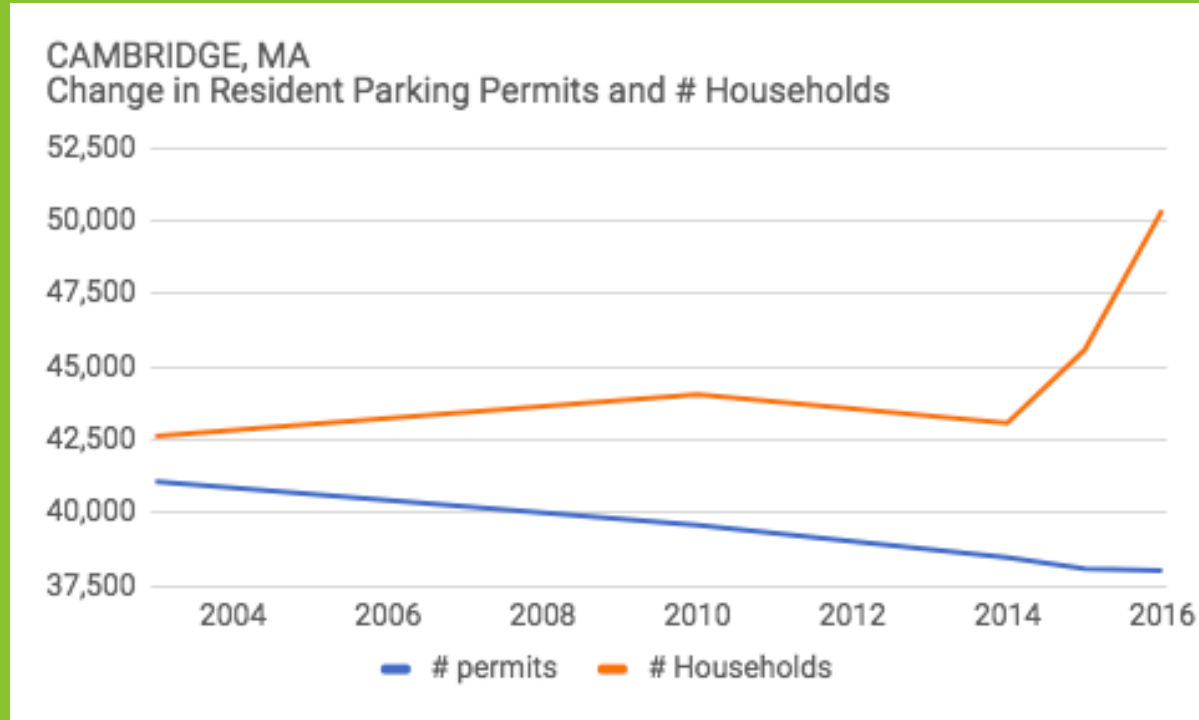

Zipcar: 1 million people sharing 13,000 cars around the world,

**Each car replaces 13 personally owned cars
(Removing 1 729 000 cars from cities!)**

In Cambridge MA:

25% of Cambridge residents are members!
~200 zipcars
~2600 fewer cars!

**2003-2016 a 22% decrease
in parking registrations per household**

TODAY: Weak wrong unfair pricing

- Road User Fees that cover costs!
- Honest Parking (curb access) fees
- Pollution/Air Quality fees
- Congestion Pricing
 - Per square meter?!

7

Seek fair user fees

*Shared vehicles include all those used for hire to transport people (mass transit, private shuttles, buses, taxis, auto-rickshaws, car and bike-sharing) and urban delivery vehicles.

An analysis of New York City e-hailing (TNC) data

- net increases of 31 million trips and 52 million passengers over the past 3 years

☐ the addition of 600 million miles of vehicular travel over the past 3 years (+7%!)

- increased congestion

Figure 11. Changes in ridership by mode, 2014 to 2015

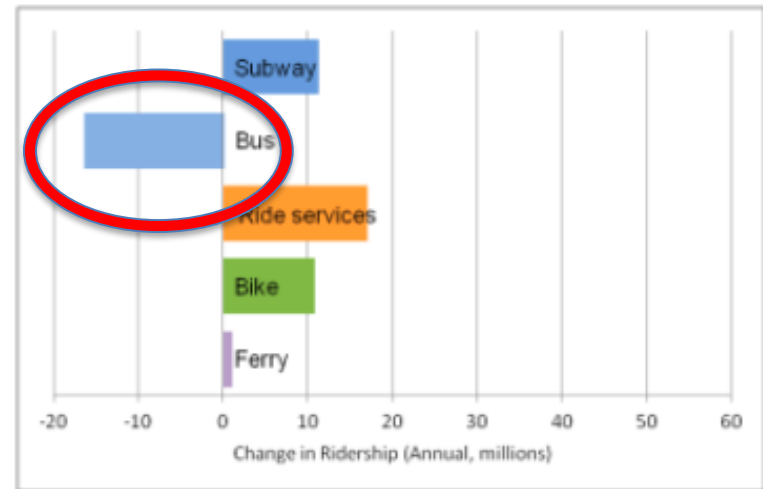

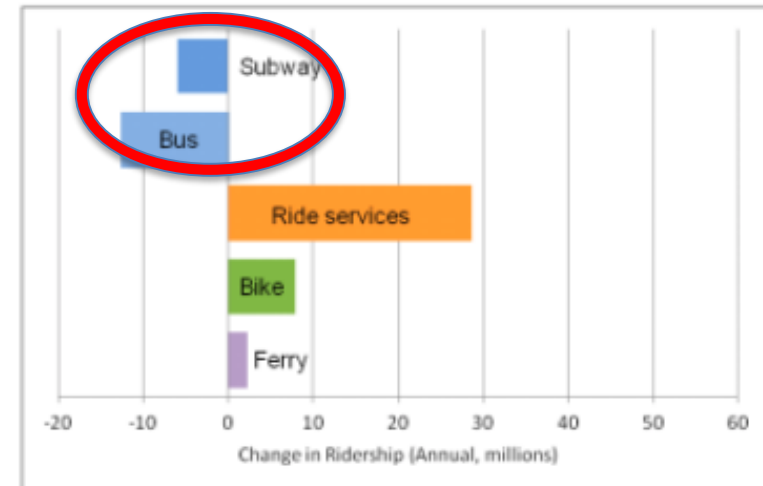

Figure 12. Changes in ridership by mode, 2015 to 2016

Solution is NOT
to tax or ban
e-hailing or taxis

*surge pricing IS congestion pricing
With revenues going to company
rather than government!*

FAIR USER FEES ACROSS ALL MODES

*And to use congestion pricing revenue
to improve sustainable transit modes*

HOV lanes with
dynamic pricing (Lexus) lanes (!)

Urban HOV3+ lanes & paid

- Road User Fees that cover costs!
- Honest Parking (curb access) fees
- Pollution/Air Quality fees
- Congestion Pricing
 - Per square meter?!

When AVs come,
We will already be getting revenue from pickup, dropoff, delivery curb management fees, so loss of parking fees won't bankrupt us.

When AVs come,
Well-priced congestion pricing will disincentivise Zombie cars (zero occupancy)

7

Seek fair user fees

*Shared vehicles include all those used for hire to transport people (mass transit, private shuttles, buses, taxis, auto-rickshaws, car and bike-sharing) and urban delivery vehicles.

Transportation networks tend toward monopoly

Monopolies (even regulated ones) innovate little.
Global monopolies exclude local & startup companies

Ensure Competition & *Interoperability*

We must demand the use of **Standard Open Data** for Shared Rides (**see [OTP.org](https://otp.org)**), and Metros & Buses (GTFS).

If we follow rules 1-9,
ELECTRIC + SHARED + AUTOMOUS will
happen naturally.

If we fail to execute *perfectly*
this rule #10 will still make it
happen

No matter when AVs arrive, we
will have made our cities better!

10

Automated vehicles must be shared

*Shared vehicles include all those used for hire to transport people (mass transit, private shuttles, buses, taxis, auto-rickshaws, car and bike-sharing) and urban delivery vehicles.
