## Cost of depression of adults in Taiwan.

Chan AL<sup>1</sup>, Yang TC, Chen JX, Yu LH, Leung HW.

### Author information

### Abstract

**OBJECTIVE:** To estimate the direct cost of depression in Taiwanese adults for the years 2000-2002.

**METHODS:** The medical claims database of the National Health Bureau was analyzed and the cost of treating adults (>15 years of age) with the diagnosis of depression was calculated.

**RESULTS:** The total direct medical costs of adult depression in the three years 2000, 2001, and 2002 were approximately US dollars 93

receiving treatment did not increase steadily over the same time period with treatment rates of 1.5% in 2000, 2.5% in 2001, and 2.0% in 2002. The recent annual prevalence of depression in Taiwan has been estimated at 4-5%. Thus, the Taiwanese health authority spends an annual average of US dollars 116.6 million to treat depression (1.2% of total national expenses). In sum, the treatment of depression, while costly, deserves greater attention by public health officials in order to avoid the already significant burden of this disease on both patients and society.

Future research will therefore require more accurate statistical data in order to assess the effects of depression-related burdens on individuals and society, especially with respect to the capacity to work.

shaping healthy communities

## Children and the built environment

- Design and place “Kids at Play” signage to promote speed reduction on streets; *and*
- **Co-location of amenities** including local shops and play spaces.

## Designs around children’s health

- Apply **Co-design** and engagement principles in school curriculum to ensure children’s engagement and ownership of initiatives that are relevant to their overall health and well-being; *and*
- **Safe walking and cycling paths** (map and smartphone apps) QR coded check-points, social school support element.

## Play

- **Safer speeds** (30km/h or 15km/h) near areas where children’s play has priority; *and*
- **Promote awareness of the importance of play** and related strategies by targeting governments, stakeholders, communities and schools.
